Subject: Gentamicin in 301ri Kit Configuration

VALIDATE[®] TDM1 (Order Number 301ri) test kit is currently being manufactured using the GentQ configuration on the Roche cobas[®].

The Roche cobas[®] currently has two Gentamicin configurations available, the GentQ and the newer version, GentC. At this time the current VALIDATE[®] TDM1 (301ri) kit will recover half of the new GentC reagent reportable range (0.24-12.0 ug/mL) due to the reportable range and method difference between GentQ and GentC. The GentQ reportable range is 0.3-10.0 ug/mL.

To address the GentC range coverage, we have a set 2 in development. The set 2 for the VALIDATE[®] TDM1, 301ri, kit will be specific for the GentC reagent and associated reportable range. We anticipate this kit to be available in September 2021.
